## Torsionally Rigid All-Steel Couplings - ARPEX Series

### General information

#### Overview

**6**

ARPEX couplings have proved themselves for over 30 years in all areas of technology where reliable, maintenance-free torque transmission is required. ARPEX couplings link machine shafts and compensate for shaft misalignments, while generating only low restorative forces. Thanks to the use of spring steel plates and backlash-free screw connections, ARPEX couplings are torsionally rigid and backlash-free. All ARPEX coupling components are manufactured from high-quality steel. Robust, compact construction guaranteeing a high level of operational reliability and a long service life is therefore possible. High-precision production ensures that at speed in the assembled condition only low forces act on the machine parts connected to them. ARPEX couplings can be used for both directions of rotation and are thus also suitable for reverse operation.

ARPEX couplings are not subject to wear and, if correctly designed, assembled and installed, can be expected to have an unlimited service life. With most types the intermediate spacer can be fitted radially without having to move the driving and driven machines.

#### Design

ARPEX couplings are manufactured completely from steel. Torque is transmitted by means of torsionally rigid, flexible plates. The plates are held together by a sleeve and ring to form a compact plate pack. This ensures easy, operationally safe installation. Two plate packs fastened alternately to the flanges permit compensation of shaft misalignments in an angular, radial and axial direction. On coupling types with a single plate pack only angular and axial misalignments are possible.

#### Materials

All coupling parts like hubs, spacers and flanges are manufactured from high-grade steel; the plates are made from stainless, hard-rolled CrNi spring steel. Bolts and nuts are of quality 10.9 or 10.

#### Application

ARPEX couplings are available as a catalog standard from 92 Nm to 1450000 Nm and are divided into various series. Because of this series diversity, ARPEX couplings meet most torque and speed requirements as a universal coupling solution in general mechanical engineering. The individual series and their corresponding possible applications are described in full in the following sections.

Thanks to a large number of standard components ARPEX couplings can be combined to make many different types. In this way, standard types can be used with many drives.

ARPEX couplings can withstand temperatures between  $-40^{\circ}\text{C}$  and  $+280^{\circ}\text{C}$  in operation. On request, they can also be specially equipped for use in other temperature ranges.

**ARPEX coupling optionally suitable for potentially explosive environments.**

**Complies with Directive 94/9/EC for:**

**CE Ex II 2G T2/T3/T4/T5/T6**  
 $-40^{\circ}\text{C} \leq T_a \leq +230^{\circ}\text{C}$  /  $+150^{\circ}\text{C}$  /  $+85^{\circ}\text{C}$  /  $+50^{\circ}\text{C}$  /  $35^{\circ}\text{C}$

**CE Ex II 2D T 120 °C**  $-40^{\circ}\text{C} \leq T_a \leq +70^{\circ}\text{C}$

**CE Ex I M 2**

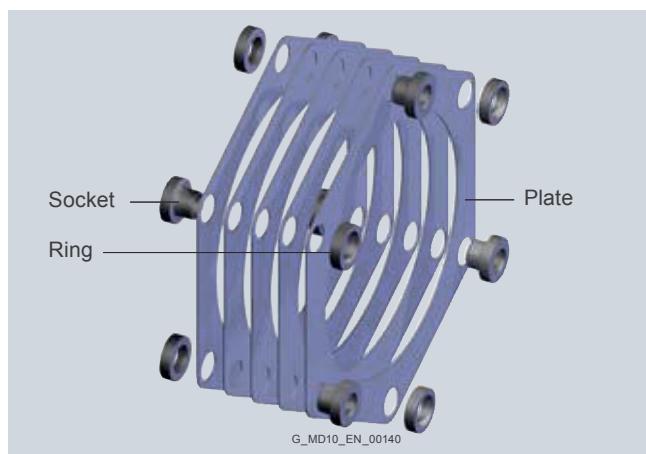

To meet the high quality demands made of ARPEX couplings, the development and manufacture of ARPEX couplings is integrated into a certified quality management system in accordance with the requirements of DIN EN ISO 9001.

Type approval for use of ARPEX couplings in shipbuilding has been issued by the following classification societies: American Bureau of Shipping (ABS), Det Norske Veritas (DNV), Germanischer Lloyd (GL) and Lloyd's Register of Shipping. Product certification to GOST-R for the Russian market has already been obtained.

#### Plate pack

The flexible elements in an ARPEX coupling take the form of plate packs. The individual, thin plates are held together by a socket and ring to form a compact plate pack. The picture below shows the structure of a ring plate pack.

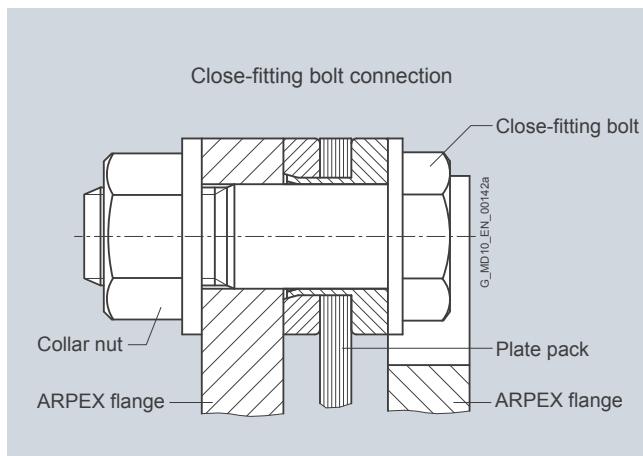

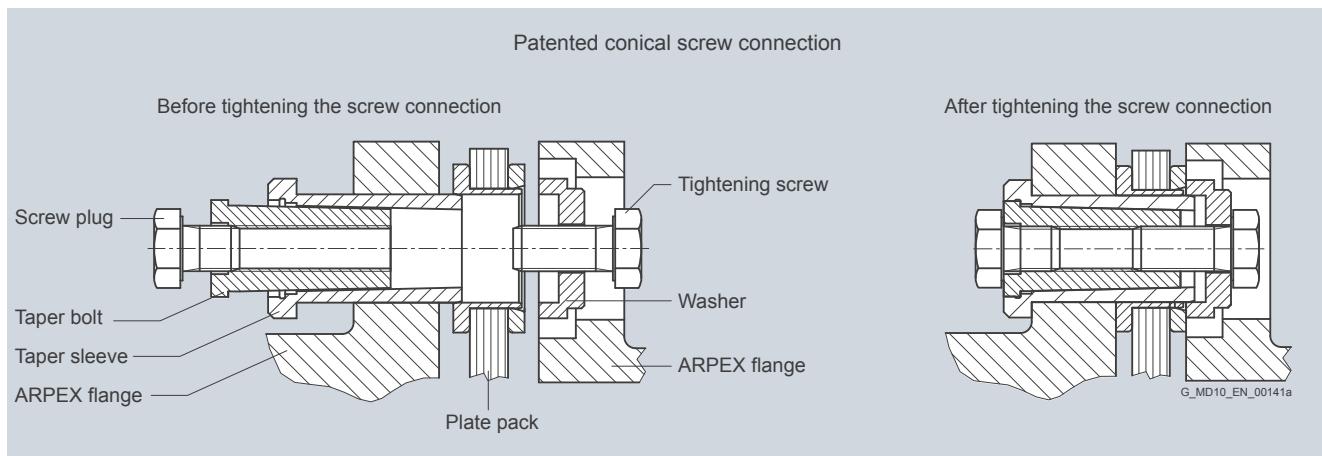

# FLENDER Standard Couplings

## Torsionally Rigid All-Steel Couplings - ARPEX Series

### General information

#### Plate pack screw connection

#### Features of plate pack screw connection

Up to bolt size M22, the plate pack screw connection on ARPEX couplings is in the form of a close-fitting bolt connection. After that the patented conical screw connection is used. The decisive advantage of this screw connection is considerably simplified fitting. The use of an hydraulic fitting tool is no longer necessary. All sizes can be fitted with a torque wrench.

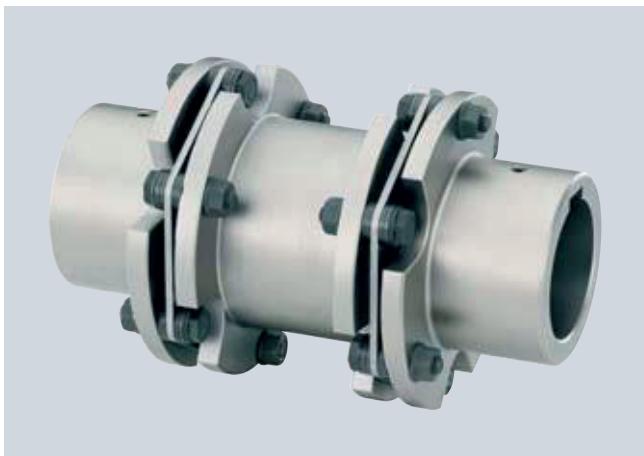

A further feature of the conical screw connection is the genuine positive connection resulting in high centering accuracy and, thus, a high balancing quality. Material: High-grade quenched and tempered steel.

# FLENDER Standard Couplings

## Torsionally Rigid All-Steel Couplings - ARPEX ARS-6 Series

### General information

#### Overview

Coupling can be designed for potentially explosive environments.

## 6

#### Benefits

ARPEX couplings of the ARS-6 series are outstanding for their versatility. Most standard components are available from stock, resulting in short delivery times. Their use in potentially explosive environments in accordance with Directive 94/9/EC is possible.

#### Application

ARPEX couplings of the ARS-6 series are a versatile coupling solution which thanks to standard modular components can be used for most drive requirements at a low to medium speed. Torques of between 170 and 106000 Nm can be transmitted at a permitted angular misalignment of 0.7°. The open flange form is regarded as very easy to fit and has easily accessible screw connection points. On most types, the intermediate spacer can be radially fitted without moving the connected units.

Main areas of application for the ARS-6 series:

- Paper-making machines
- Printing machines
- Compressors
- Pumps
- Fans and blowers
- Film and foil machines
- Generators
- Presses
- Metalworking machines
- Conveyors
- Crane systems
- Textile machines
- Plastics processing machines
- Centrifuges

# FLENDER Standard Couplings

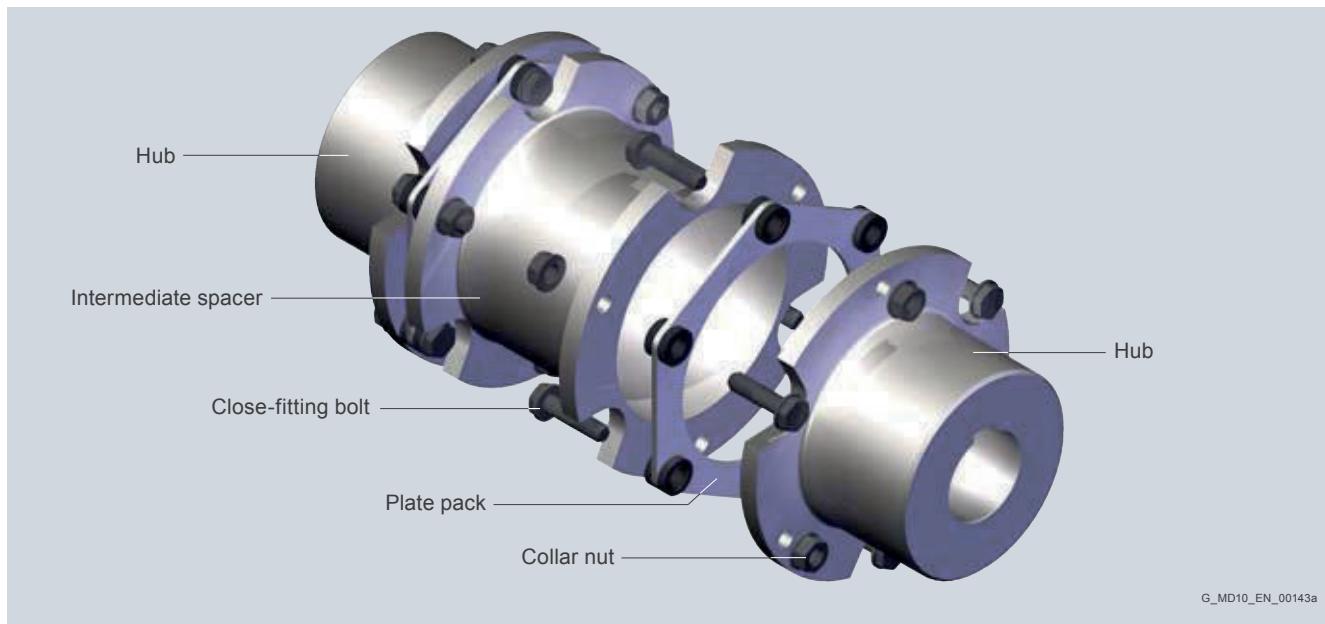

## Torsionally Rigid All-Steel Couplings - ARPEX ARS-6 Series

### General information

#### Design

The classic design of an ARPEX couplings of the ARS-6 series is shown in the following illustration. The plate packs are bolted alternately between the flanges of the coupling hubs and the intermediate spacer. Up to size 280-6 close-fitting bolts and from size

305-6 conical screw connections are used for fastening. A large number of intermediate spacer and shafts, hubs and flanges can be combined and thus cover a large number of possible drive requirements.

Design of an ARPEX coupling, ARS-6 series, type NEN

#### Variants of the ARPEX coupling, ARS-6 series

##### Types

<b>NEN, BEN, BEB</b>	Variant with standard intermediate spacer, many sizes available from stock
<b>NON, BON</b>	Variant with shortest intermediate spacer
<b>NUN, BUN, BUB</b>	Variant with split intermediate spacer
<b>NHN</b>	Variant with intermediate spacer for customer-specific shaft distance
<b>NZN</b>	Variant with reinforced intermediate spacer
<b>NWN</b>	Variant with intermediate shaft

All coupling types can be very easily combined with further standard components in the ARPEX modular system. Jumbo hubs are used to permit larger maximum bores.

Clamping hubs transmit torque by friction without the use of parallel keys.

F, D and C flanges offer many different possibilities for flange connection.

The coupling parts of the ARPEX ARS-6 series are machined on all sides. Exceptions are H and Z spacers and intermediate shafts. The spacers are delivered with unmachined, primed spacer tube.

Higher torques and maximum speeds with similar coupling outer diameters DA can be achieved with the ARPEX ARC-8/-10 series.

Further application-specific coupling types are available in selection module **x.CAT** at [www.flender.com](http://www.flender.com). Dimension sheets and further information are available on request.

Torsionally rigid ARPEX couplings up to size 240-6 available from stock.

For simplified fitting on B hubs, plate packs from size 280-6 available with closing element.

Weights and mass moments of inertia apply to the entire coupling with maximum bores D1/D2.

Ordering example:

ARPEX ARS-6 NEN coupling, size 105-6,

bore ØD1 40H7 mm, with keyway to DIN 6885 and set screw,

bore ØD2 45K7 mm, with keyway to DIN 6885 and set screw.

Product code:

**2LC0470-1NS99-0AA0-Z**

**LOW+M1A+M13**

## Torsionally Rigid All-Steel Couplings - ARPEX ARS-6 Series

### Type NON

#### Selection and ordering data

Torsionally rigid coupling with shortest possible shaft distance enabling problem-free fitting with commercially available tools. Type NON with radially freely dismountable intermediate spacer. Type BON cannot be radially dismounted without moving the units.

Up to size 240-6 available from stock.

For simplified fitting on B hubs, plate packs from size 280-6 available with closing element.

Weights and mass moments of inertia apply to the entire coupling with maximum bores D1/D2.

Ordering example:

ARPEX ARS-6 NON coupling, size 105-6,

Bore ØD1 40H7 mm, with keyway to DIN 6885 and set screw,

Bore ØD2 45K7 mm, with keyway to DIN 6885 and set screw.

Product code:

**2LC0470-1NV99-OAA0-Z**

**LOW+M1A+M13**

The permitted length of the intermediate spacer depends on the maximum operating speed of the coupling (see following table).

For greater shaft distances, see type NZN.

Weights and mass moments of inertia apply to the entire coupling with maximum bores D1/D2 and S = 1000 mm.

The permitted length of the intermediate spacer depends on the maximum operating speed of the coupling.

Weights and mass moments of inertia apply to four hubs with maximum bore D1/D2 and two plate packs.

### Ordering example:

ARPEX ARS-6 NWN coupling, size 105-6, with intermediate shaft and shaft distance S = 1000 mm,  
Bore ØD1 40H7 mm, with keyway to DIN 6885 and set screw,  
Bore ØD2 45K7 mm, with keyway to DIN 6885 and set screw.

### Product code:

**2LC0470-1NX99-0AZ0-Z**

**L0W+M1A+Q0Y+M13**

plain text to Q0Y: **S = 1000 mm**

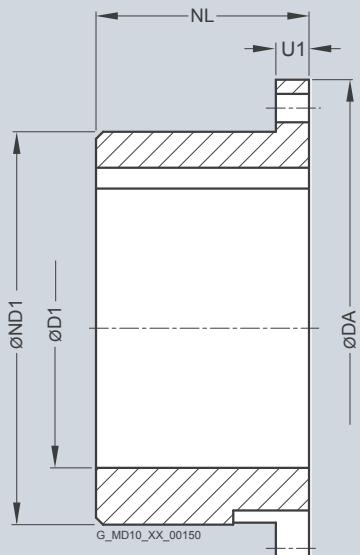

# FLENDER Standard Couplings

## Torsionally Rigid All-Steel Couplings - ARPEX ARS-6 Series

**Further hubs and flanges**  
**J hub**

### Selection and ordering data

J hubs or jumbo hubs are used where the shaft diameter is greater than the maximum bore diameter of the N hub. Because of the larger hub core diameter “ $\varnothing ND1$ ”, the J hub cannot be used as a B hub, i.e. the hub core diameter is greater than the inside diameter of the spacer tube and cannot project into the spacer. The J hub can be combined with any spacer.

# FLENDER Standard Couplings

## Torsionally Rigid All-Steel Couplings - ARPEX ARS-6 Series

# FLENDER Standard Couplings

## Torsionally Rigid All-Steel Couplings - ARPEX ARS-6 Series

### Further hubs and flanges

#### Clamping hub

##### Selection and ordering data

Standard clamping hub types 124 and 125 can be combined with any spacer. It should be noted that the clamping hub can be used only as an N hub (hub core outside). Clamping hub as "B hub" (hub core in spacer tube) on request. Transmissible torque and maximum bore diameter are smaller on a B hub variant than stated below.

##### Function

ARPEX clamping hubs transmit torque with the aid of a flexible press fit. By pulling the clamping ring on by means of the tightening screws the necessary surface pressure is applied in the "shaft/hub" contact area. After the tightening operation the clamping ring lies up against the clamping hub. The gap dimension between the clamping hub and the clamping ring is then zero. This has the effect that even with repeated fitting and dismounting the balancing condition is maintained (no wobble effect). Clamping hubs can be clamped as often as required. It must be ensured that the taper surfaces are adequately lubricated.

##### Transmissible torque

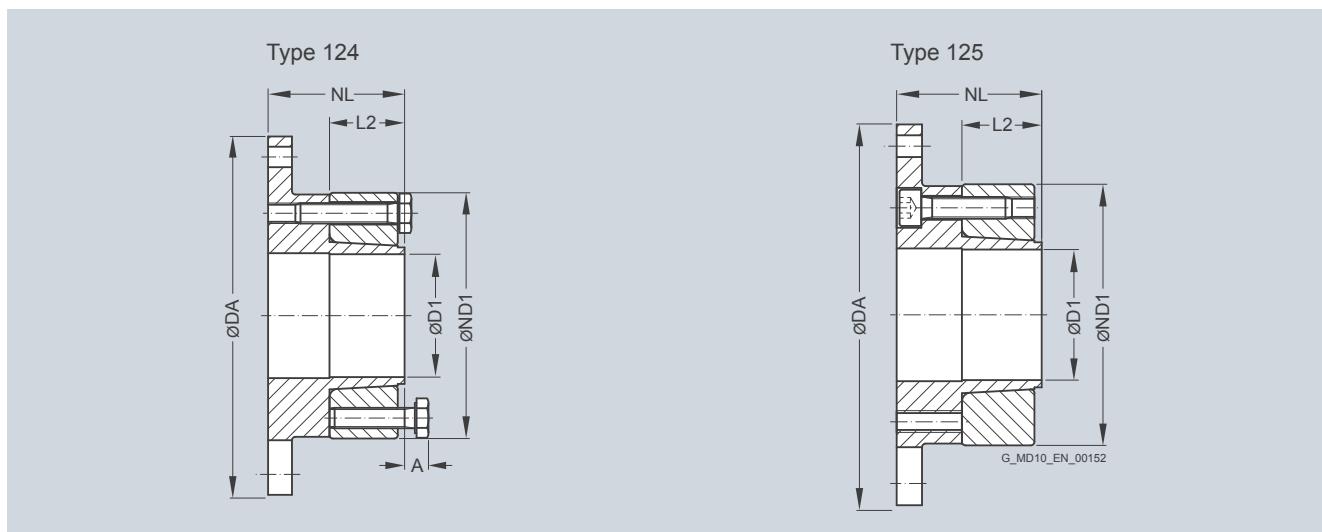

The clamping connections are designed to enable the specified maximum torques to be transmitted. These maximum torques may not be exceeded. The mathematical coefficient of friction between the shaft and the clamping hub is  $\mu = 0.16$ .

##### Fitting clearance and surface roughness

The transmissible torques take into account the maximum fitting clearance and maximum surface roughness. For other shaft tolerances reduced torques or other bore tolerances must be used. The surface roughness of the shaft should be  $\leq R_a = 1.6 \mu\text{m}$ .

##### The shaft tolerance must be specified in the order.

To specify, -Z must be added to the product code and the order code Y26 with plain text specification of the shaft tolerance for D1 must be added as well. The fit pairing G6/h6 should be used wherever possible.

# FLENDER Standard Couplings

## Torsionally Rigid All-Steel Couplings - ARPEX ARC-8/-10 Series

### General information

#### Overview

Coupling can be designed for potentially explosive environments in accordance with 94/9/EC.

#### Benefits

ARPEX couplings of the ARC-8/-10 series are outstanding for their robust construction. They have been optimized for high torques combined with high speeds. The patented conical screw connection ensures reliable torque transmission by a true

positive fit and is designed to be extremely easy to fit. Couplings can be designed for potentially explosive environments in accordance with 94/9/EC.

6

#### Application

ARPEX couplings of the ARC-8 and ARC-10 series are output- and speed-optimized coupling solutions. Power transmission is by means of patented conical screw connections and plate packs of the octagonal and decagonal types. Torques of between 8.5 and 1450 kNm can be transmitted at a permitted angular misalignment of 0.2° to 0.4°. The closed flange shape and a compact construction permit high peripheral speeds and high speeds. On most types, the intermediate spacer can be radially fitted without moving the connected units.

Main areas of application for the ARC-8/-10 series:

- Paper-making machines
- Printing machines
- Compressors
- Fans and blowers
- Generators
- Presses
- Conveyors
- Crane systems
- Pumps
- Mills
- Rotary furnaces
- Stirrers

# FLENDER Standard Couplings

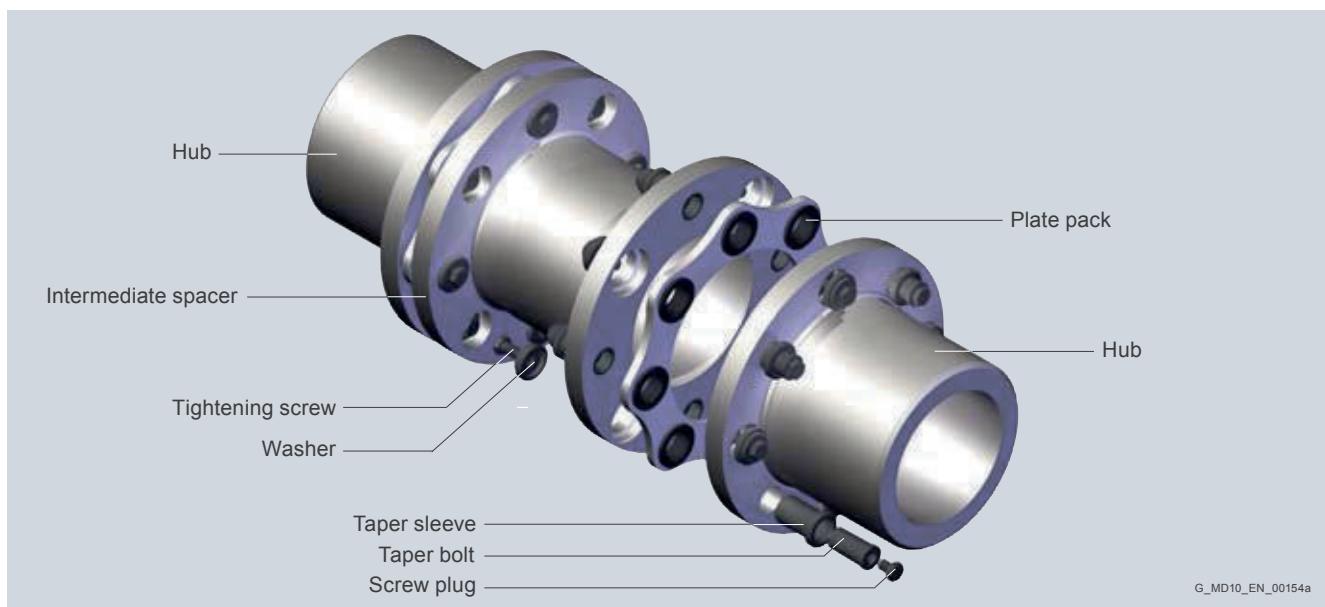

## Torsionally Rigid All-Steel Couplings - ARPEX ARC-8/-10 Series

### General information

#### Design

The classic design of an ARPEX coupling of the ARC-8/-10 series type NEN is shown in the following illustration. The plate packs are bolted alternately between the flanges of the coupling hubs and the intermediate spacer.

Conical screw connections are used for fastening. The intermediate spacer lengths are variably designed according to customer specifications.

Design of an ARPEX coupling, ARC-8/-10 series, type NEN

#### Variants of the ARPEX coupling, ARC-8/-10 series

Types	
<b>NEN</b>	Variant with intermediate spacer machined on all sides, length variable
<b>NHN</b>	Variant with unmachined intermediate spacer, length variable
<b>BUB</b>	Compact variant with split intermediate spacer for short shaft distances
<b>MFEFM</b>	Variant with preassembled intermediate unit and machined intermediate spacer, length variable
<b>MFHFM</b>	Variant with preassembled intermediate unit and unmachined intermediate spacer, length variable

The coupling parts of the ARPEX ARC-8/-10 series with the exception of the H spacers have been machined on all sides. These are delivered with unmachined and primed spacer tube.

Further application-specific coupling types are available in selection module **x.CAT** at [www.flender.com](http://www.flender.com). Dimension sheets and further information are available on request.

# FLENDER Standard Couplings

## Torsionally Rigid All-Steel Couplings - ARPEX ARC-8/-10 Series

Type BUB

Split intermediate spacer permits preassembly of the coupling halves at the factory and easy final assembly by the customer (optional).

Power transmission via patented conical screw connection.

The hubs are standard-manufactured from high-grade steel. In the case of smaller bore diameters higher-grade material is used, depending on the application (additional price).

Weights and mass moments of inertia apply to the entire coupling with maximum bores D1/D2.

Ordering example:

ARPEX ARC-8 BUB coupling, size 270-8,

Bore ØD1 120H7 mm, with keyway to DIN 6885 and set screw,

Bore ØD2 130K7 mm, with keyway to DIN 6885 and set screw.

# FLENDER Standard Couplings

## Torsionally Rigid All-Steel Couplings - ARPEX ARP-6 Series

### General information

#### Overview

Coupling can be used for potentially explosive environments in accordance with 94/9/EC.

#### Benefits

ARPEX couplings of the ARP-6 series are outstanding for their application-optimized construction. The two types NAN and MCECM have been specially designed for drives with uniform to medium loads and at the same time meet the requirements of API 610. The type MCECM with preassembled CEC intermediate

unit can also be optionally designed to API 671. A special catcher device serves to secure the intermediate spacer in the event of plate breakage. Their use in potentially explosive environments in accordance with Directive 94/9/EC is possible.

#### Application

ARPEX series ARP-6 couplings have been specially developed for pump drives and specifically for centrifugal pump drives. Special care was taken to meet the requirements of API 610 and API 671 (API = American Petroleum Institute). Power is transmitted via close-fitting bolts and nuts from size 310-6 with conical screw connection and plate packs in hexagonal design. Torques of between 100 and 17000 Nm can be transmitted at a permitted angular misalignment of 0.7°. The closed flange shape and a compact construction permit high peripheral speeds and high speeds. The intermediate spacer can be fitted radially without moving the connected units.

Main areas of application for the ARP-6 series:

- Centrifugal pumps
- Boiler feed pumps
- Propeller pumps
- Wing pumps
- Pipeline pumps
- Turbo compressors
- Screw compressors
- Turbo blowers
- Axial, radial blowers
- Rotary-piston blowers
- Fans

# FLENDER Standard Couplings

## Torsionally Rigid All-Steel Couplings - ARPEX ARW-4/-6 Series

### General information

#### Overview

Coupling can be designed for potentially explosive environments in accordance with 94/9/EC.

## 6

#### Benefits

ARPEX couplings of the ARW-4/-6 series are outstanding for their large angular misalignment capacity of 3°. They were specially designed for drives where high misalignments which have

to be compensated for by the coupling are to be expected. The intermediate spacer lengths are variable and are manufactured to customer specifications.

#### Application

ARPEX couplings of the ARW-4/-6 series are used where large misalignment capacities are required. In the paper-making machine industry, the ARW coupling has already proved itself as a maintenance-free alternative to the cardan shaft. Torques of between 92 and 80000 Nm can be transmitted at a permitted angular misalignment of 3.0°. The intermediate spacer can be fitted radially without moving the connected units.

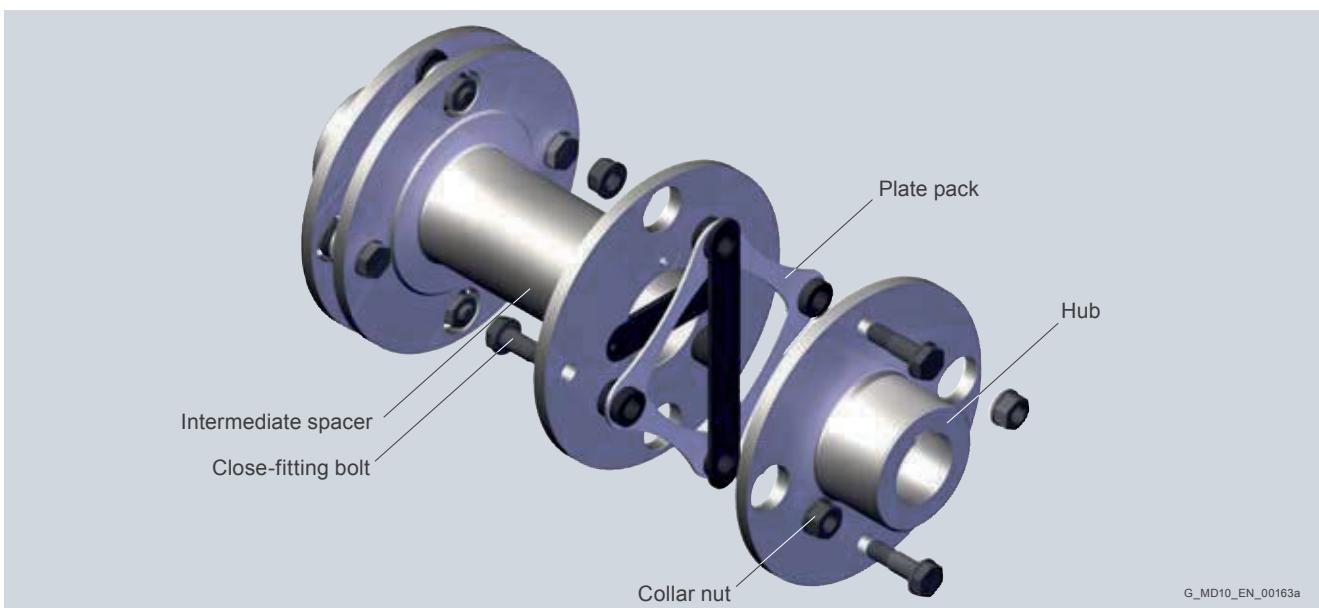

Main areas of application for the ARW-4/-6 series:

- Paper-making machines
- Wind power systems
- Traction drives

#### Design

The design of an ARPEX NHN coupling of the ARW-4/-6 series is shown in the following illustration. The plate packs are bolted alternately between the flanges of the coupling hubs and the intermediate spacer. Up to size 292-4 close-fitting bolts and from size 324-4 conical screw connections are used for fastening. Up to

size 647-4 plate packs in rectangular design, from size 695-6 in hexagonal design are used. The intermediate spacers are variable in length and are manufactured specifically to customer specifications.

G\_MD10\_EN\_00163a

Variants of the ARPEX coupling, ARW-4/-6 series

# FLENDER Standard Couplings

## Torsionally Rigid All-Steel Couplings - ARPEX ARF-6 Series

### General information

#### Overview

Coupling can be designed for potentially explosive environments in accordance with 94/9/EC.

#### Benefits

ARPEX couplings of the ARF-6 series are extremely short and so suitable for drives with short shaft distances. They also serve as self-aligning couplings for axial, angular and radial misalignment. The hubs are available both as pure clamping hubs for smooth shafts and with parallel keyway for shafts with parallel

key. The variant with slit clamping hubs enables the delivery of fully preassembled couplings. This means that the entire coupling can be dismounted and fitted without moving the connected units.

#### Application

ARPEX couplings of the ARF-6 series are designed for minimum fitting spaces without having to sacrifice the advantages of the two-joint coupling. It is thus possible to compensate for both axial and angular as well as radial misalignment. By using half-shell clamping hubs, the coupling can be radially freely dismounted. Power is transmitted via hexagon socket head cap screws and close-fitting bolts with nuts and ring plate packs in

hexagonal design. Torques of between 120 and 6100 Nm can be transmitted at a permitted angular misalignment of 0.7°.

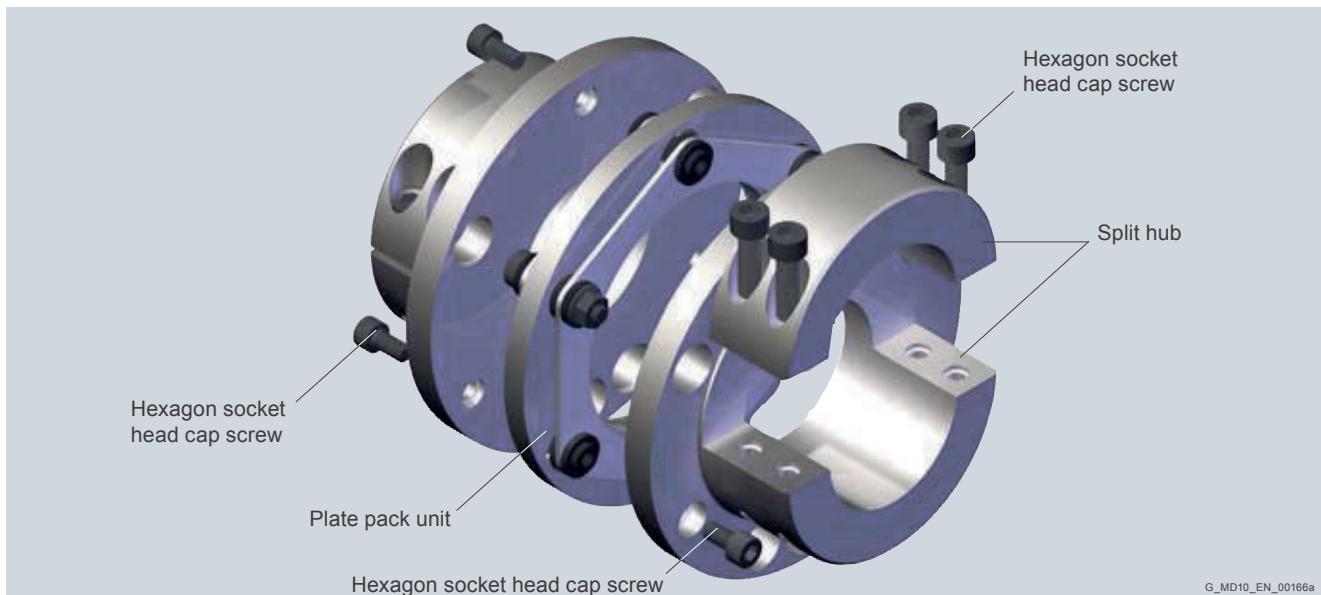

Main areas of application for the ARF-6 series:

- Film stretching machines
- Machines in the cellulose industry
- Machines in confined fitting situations

#### Design

The two plate packs form a unit with the adapter disk and are screwed together with close-fitting bolts and nuts at three points. The alternate connection of this intermediate unit with the flanges of the split coupling hubs is achieved by means of short

hexagon socket head cap screws at further three points. The hubs are designed as axially slit clamping hubs with a half-shell. For larger bores these can be manufactured as jumbo hubs. Optionally, the hubs are also available without parallel keyway.

Design of the ARPEX coupling, ARF series

### Selection and ordering data

Ring plates (Fig. 1) are used for the plate packs.

The plate pack unit for the ARF-6 series is readily available as a spare part in most sizes.

The plate pack unit comprises two preassembled plate packs with adapter disk, including screw connection.

The standard screw connection comprises hexagon socket head cap screws and close-fitting bolts with nuts.
